

I do not think that it is right that the FCC should stop xm radio from broadcasting local weather and news. I like the service of xm radio and I love the fact that they have great content and I love the local traffic and weather. It is a great service and if the local FM stations want to compete then they should offer the same thing that XM does. but they are too money hungry and have to stuff their stations with tons of commercials.. Do not ban XM from delivering great content.
